EXPERIENCE

Deepalgorithms Solutions (Internship)
<ul style="list-style-type: none">I did the internship as frontend developer with React JS at Deepalgorithms Solutions, located in Hyderabad.I have developed the UI for different components of the Biometric Behavioral Detection project.I have developed the UI part of the employee leave management system for the company, and the technology used was React JS and Bootstrap.

PERSONAL PROJECTS

E-CHALLAN MANAGEMNT SYSTEM	February 2024-May 2024
<ul style="list-style-type: none">Description: The idea behind this project is to facilitate the users for online challan system and make this web app faster at client side by using some of the latest frontend technologies.Tools/Technology used: React JS, Node JS, MongoDB, Bootstrap.I work as a team leader on this project and basically work with React JS to develop the UI part of the project.This project has an admin section and a user section where admin can register the accused persons, and user can pay there challan online and see the challan issued to them.	

EMPLOYEE LEAVE MANAGEMENT SYSTEM	October 2023-October 2023
<ul style="list-style-type: none">Description: This is a web application for an employee leave management system where companies can manage their employee records easily. I have developed only the UI part, and backend is not integrated with it.Tools/Technology used: React JS, Bootstrap, CSS, and JavaScript.I have built this project according to the company requirements, learned how to actually work with the requirements, and also tried to write clean code.	

NEWS WEB APP	January 2023-January 2023
<ul style="list-style-type: none">Description: This is a news web application where users can read 7 different categories of news, and every news item is latest, meaning it is in real time.Tools/Technology used: React JS, Bootstrap.I have built this project alone and learned about fetching the API and displaying the data coming from the API according to need.	

PORTFOLIO	November 2023 – December 2023
<ul style="list-style-type: none">Description: This is my portfolio web application built on MERN stack technology, where every piece of information is available regarding me. It is also a showcase of my skills as Full stack developer.Tools/Technology used: - React JS, Node JS, Bootstrap.I have made this project myself and learned about how to customize and write clean code. I have tried my best to implement maximum number of concepts that I have learned in React.	

TRAINING AND CERTIFICATION	
<ul style="list-style-type: none">Full stack development with JavaScriptCore Java Programming	<div>IBM</div> <div>Hacker Rank</div>
